PROFESSIONAL SUMMARY

Frontend specialist with 5+ years building and architecting production web applications in React and TypeScript across enterprise SaaS, e-commerce, and internal tooling, with full-stack capability across Next.js, Firebase, and Supabase. Proven track record owning frontend architecture end-to-end — from legacy modernization (Oracle APEX → Astro SSG) to building design systems on top of platforms like Shopify Polaris. Comfortable operating as a senior IC or lead, mentoring engineers, and working directly with cross-functional teams (backend, DevOps, design) to ship reliable, performant products. Brings a background in visual design, UX, and technical writing that sharpens both interface precision and documentation clarity.

PROFESSIONAL EXPERIENCE

Frontend Developer — Product Genius AI, Cambridge, MA (Remote)

Jun 2024 – May 2026

- Maintained and extended a production Shopify app (React, TypeScript, Shopify Polaris) used by merchants for AI-driven storefront personalization, shipping new features and screens with zero unplanned downtime.
- Migrated the company's public-facing marketing site from Framer to Next.js (SSG) with TailwindCSS and shadcn/ui, integrating a Sanity-powered blog — improving load performance and giving the team a headless content workflow.
- Architected the ground-up rebuild of Shopify App V2 (TailwindCSS, shadcn/ui, Vite, React) using a feature-based architecture, independently planning and delivering its initial development phases.
- Led significant portions of Shopify App V1's migration from legacy architecture to a modern React framework, introducing a tokenized design system while maintaining zero downtime in production.
- Drove codebase health through systematic code-splitting and cleanup, and implemented mobile-first responsive UI across all customer-facing surfaces.

Senior Frontend Developer — Tinkering Inc., California, USA (Remote)

Jan 2022 – May 2024

- Led complete frontend development of an enterprise-grade Property Management ERP with role-based authentication, built on Redux Toolkit Query, Axios, Formik/Yup, React, and Bootstrap
- Built the public-facing marketing site for the Property Management platform, including scroll-triggered SVG animations implemented with TailwindCSS.
- Delivered Frame Fitness, a premium single-product e-commerce platform: integrated Shopify Blogs via GraphQL, Stripe checkout, and custom scroll-based heading animations for a high-conversion, brand-accurate experience.
- Translated complex Figma specifications into pixel-perfect, brand-accurate UI, applying UX judgment (not just implementation) to layout, flow, and interaction decisions.
- Contributed frontend architecture and delivery across multiple additional client projects, consistently applying mobile-first, responsive design principles.

Web Consultant & Lead Developer — Independent Software Practice, Pakistan (Freelance)

May 2021 – Dec 2021

- Directed full development lifecycles for 10+ custom B2B web applications, delivering high-reliability solutions on schedule for international clients.
- Recruited, mentored, and led a distributed team of engineers, designers, and QA testers, building an internal payroll automation tool that cut administrative/payroll processing time by roughly 90%
- Built a Finance Management System for a community welfare society, providing real-time visibility into fund collections, pending payments, and operational expenses across multiple streets/households.
- Developed a cross-platform Electron.js desktop application to automate shipping-label layout for a high-volume Daraz (e-commerce) seller, cutting printing costs and reducing label-prep time from minutes to seconds.
- This engagement was the foundation for core skills — React, Next.js, advanced CSS, and Firebase — later deepened and professionalized during subsequent full-time roles.

Frontend Developer — Komorebi Technologies, Pakistan

Oct 2020 – May 2021

- Built and integrated frontend for multiple PHP-based web platforms, including a course-content site, a cargo import/export admin panel, and a custom lightweight CMS for an IT Support Business enabling non-technical, page-by-page content edits.
- Worked across the full stack in PHP, JavaScript, HTML, and CSS, handling both UI implementation and backend integration.

Frontend Developer (Part-Time) — GulzarSoft, Pakistan

Mar 2021 – Apr 2021

- Delivered HTML, CSS, and JavaScript implementation tasks; wrote first production React code here, marking the start of a React-focused career path.

Content Writer & Graphic Designer — Upwork (Freelance), Remote

Aug 2018 – Oct 2020

- Managed full client-facing project lifecycles, translating requirements into pixel-perfect visual designs (Adobe Photoshop, Illustrator) and clear technical/marketing content.
- Built a foundation in visual communication and technical writing that now informs precise, design-accurate frontend implementation and documentation.

SELECTED PROJECTS

PQIS Enterprise Platform — Lead Frontend Engineer

- Led a full frontend overhaul of a national inspection/compliance company's web presence — migrating a legacy single-page Oracle APEX site to a multi-page Astro (SSG) architecture with zero client-side JS overhead by default.
- Engineered a bespoke interactive SVG regional coverage map from scratch with async zoom/highlight state transitions, and built a component-driven UI system with TailwindCSS and DaisyUI.
- Structured the data/content layer for a future plug-and-play migration to a git-backed headless CMS (e.g., Sveltia, EmDash).

Premium Property Management (PPM) — Lead Frontend Architect

- Architected roughly 90% of the frontend from scratch for a dual-app (Admin/Owner + Tenant) real-estate ERP, establishing folder structure and state management strategy with Redux Toolkit
- Replaced heavy third-party UI libraries with a custom, lightweight component system (accordions, modals) in Bootstrap, and TailwindCSS to reduce bundle size, and implemented code-splitting and lazy loading for high-density data screens.

AI-Powered Emotion Recognition App — Final Year Project

- Built a desktop application with Electron.js integrated with a custom Python machine learning backend for real-time facial emotion recognition.

EDUCATION

Bachelor of Science in Computer Science (BSCS)

University of Gujrat, Gujrat, Pakistan — Graduated 2020

TECHNICAL SKILLS

Core Frontend & Frameworks: React.js, TypeScript (Generics/Strict Typing), JavaScript (ES6+), Next.js, Astro, Electron.js, HTML5, CSS3/SASS

State Management & Data: Redux Toolkit (Query), TanStack Query, Context API, Zod/Yup, Async State Logic, State Machines

UI Systems & Design: Tailwind CSS, shadcn/ui, Material UI (MUI), Chakra UI, Shopify Polaris, DaisyUI, Tokenized Design Systems, Figma, WCAG Accessibility

APIs & Backend Integration: REST (Axios Interceptors), GraphQL, Webhooks, Stripe Payments, Handcash, Firebase (Auth/Firestore), Supabase, RBAC, JWT/OAuth

Performance & Quality: Core Web Vitals, Code-Splitting, Lazy Loading, Memory Management, Cypress/Playwright Basics, Unit & Functional Testing

Tooling & Methods: Git, GitHub Actions CI/CD, Bitbucket, Postman, Jira (Agile/Scrum), Advanced AI-Assisted Development (Claude, Gemini, ChatGPT)

Leadership & Collaboration: Technical Leadership, Mentoring & Code Review, Cross-Functional Coordination (Backend/DevOps/Design), Client Communication, Requirements Translation

CERTIFICATIONS & LANGUAGES

Certifications: Microsoft Word 2013

Languages: English (Professional), Urdu (Native)
